SUMMARY

AI Engineer focused on building production-oriented AI systems using Large Language Models, RAG, multi-agent orchestration, and backend services. Experienced in designing agentic workflows, document ingestion and semantic retrieval pipelines, AI-powered regulatory intelligence systems, and tool-integrated conversational applications.

TECHNICAL SKILLS

Languages: Python, SQL.

AI & Generative AI: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering & Optimization, Multi-Agent Systems & Agent Orchestration, Machine Learning, Deep Learning, Natural Language Processing, Model Context Protocol (MCP), Numpy, Pandas, scikit-learn.

AI Frameworks & Tools: LangGraph, Langfuse, OpenAI API, Google Gemini API.

Backend & Databases: FastAPI, Flask, MySQL, Milvus, Neo4j, REST APIs.

Developer Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code, Cursor, Claude Code, Antigravity .

EXPERIENCE

Comply2Reg, AI Engineer

Apr 2026 - Present

- Architected a **multi-agent AI system**, designing its workflow, orchestration flow, and layered architecture with four specialized agents and a master agent for output validation and final response generation.
- Implemented evidence-gathering capabilities including **LinkedIn scraping and PDF extraction**, with extracted information supplied to agents for downstream evaluation.
- Developed a **dynamic and configurable agent framework** allowing users to create agents using custom instructions and descriptions, assign existing system capabilities, and integrate them into multi-agent workflows.
- Integrated **FastAPI and MySQL services with a CRM platform**, ensuring application data is staged and managed within the CRM without relying on local data storage.
- Built a **GraphRAG-based conversational AI system** for retrieving and reasoning over interconnected domain-specific regulatory information.
- Developed **document ingestion and knowledge retrieval pipelines**, processing 2,000+ regulatory documents using vector databases and Neo4j graph-based knowledge structures.

PROFESSIONAL PROJECTS

Multi-Agent AI Workflow Automation

- Architected a **configurable multi-agent AI platform using LangGraph and LLM APIs**, designing deterministic and LLM-driven workflows across four specialized agents and a master agent for validation and final decision-making.
- Developed a **shared reusable tool layer** supporting agent-level execution and upstream evidence gathering through capabilities such as LinkedIn scraping and PDF extraction, with extracted insights supplied to agents for downstream evaluation.
- Built a **dynamic, configuration-driven agent framework** allowing users to define custom agents using instructions and descriptions, assign existing system capabilities, and integrate them into established multi-agent workflows without hardcoding configurations.
- Enabled **platform-level LLM configurability**, allowing users to configure API credentials and switch between different frontier models directly through the frontend without modifying application code.
- Integrated **FastAPI and MySQL services with Zoho CRM** for backend communication and centralized data management, ensuring application data is staged and managed within the CRM rather than relying on local storage.
- Implemented **Langfuse observability** to trace agent execution, monitor workflow behavior, and analyze AI system performance.

Conversational AI & Regulatory Intelligence

- Built a **GraphRAG-based conversational AI system** for retrieving and reasoning over interconnected domain-specific regulatory information.
- Developed **platform connectors** to enable the conversational system to leverage integrated platform data and capabilities as additional context for user queries.
- Developed a **custom document parsing and ingestion pipeline** to process and structure 2,000+ regulatory documents for knowledge extraction and retrieval.
- Initially implemented semantic retrieval using **Milvus**, later evolving the architecture to **Neo4j-based GraphRAG** to support relationship-aware knowledge retrieval.
- Developed a **regulatory intelligence workflow** to surface and prioritize the latest regulatory updates, enabling users to filter information based on relevance and priority.

EDUCATION & CERTIFICATIONS

SJB Institute of Technology, Visvesvaraya Technological University (VTU), Bachelor of Engineering in Artificial Intelligence and Machine Learning

2022 – 2026

- CGPA: 8.72

CERTIFICATIONS

Data Science, Machine Learning, Deep Learning & NLP Bootcamp - Udemy

Certificate

2024
